## PROJECTS

**E-COMMERCE COFFEE SITE:** Full Stack E-commerce Subscription Coffee Site

*Technologies: HTML5, CSS3, JavaScript, Node.js, Angular.js, MongoDB, Express.js*

I began with the backend, using Node.js and MongoDB, first to simulate designing an API. I had to resolve the issue of password protection for customers using a node module.

I used Angular.js for the frontend for seamless page navigation and Bootstrap for responsiveness.

Live Demo – <http://kendrickdcroasters.surge.sh/>

**RATE THE THRONE:** Public Restroom Rating Application

*Technologies: HTML5, CSS3, JavaScript, Angular.js, Bootstrap, JQuery*

My team resolved the issue of finding a clean place around you to go.

We used the Google Maps API to gather data of local restrooms and built review functionality using Angular and JavaScript.

Our biggest challenge was linking data from our JSON file with the data from Google Maps and passing it to our frontend.

We used SCRUM methodologies for the week to hit our MVP.

GitHub Repo - <https://github.com/dkendrick25/rateTheThrone>

**DRAW TOGETHER:** Web App that allows collaborative drawing and simple Pictionary game capabilities

*Technologies: HTML Canvas, Node.js, JavaScript, Socket.io, CSS3*

I built the drawing board using HTML Canvas and the chat box using Socket.io. The biggest challenge was finding out what data needed to be passed from the client to the server and vice versa. Backend was built using Node.js and Express.js

Live Demo- <https://draw-together-ifyfcinztz.now.sh>
